AMERICAN SOCIETY OF PLUMBING ENGINEERS
A NON-PROFIT ORGANIZATION - Local Chapters
are not authorized to speak for the Society

**Gary Borgmann, CPD
President, C.I. Chapter of ASPE**

From the President:

I hope everyone is in the holiday spirit by now! I'm getting there! We've got the tree decorated and lights put up. Thankfully my work load has lightened up a little. This year for a change, I don't have a deadline due immediately before, or after the New Year. If I don't see you beforehand, I want to wish everyone a wonderful and Happy holiday Season!

We had a Zoom meeting on November 11th with the folks in charge of the 2022 ASPE Convention and Exposition in Indy next September, Cliff Reis, Brian Henry, and Executive Director, Billy Smith to discuss the responsibilities of the local host chapter. Basically, we are responsible for providing some of the manpower to assist in monitoring technical sessions and manning the ASPE Hospitality lounge. As the time nears we will be asking for volunteers for these duties, so if you'd like to help out, please let me, or any of the chapter officers know. One of the other tasks is providing Delegate gift bags. This is not required, but with every convention that I've attended, they've provided some really nice gifts. Typically the cost of these gifts are offset by local Manufacturer's, or their Representatives. We will be thinking about what we can provide without breaking the bank. If you are a Rep and want to help out, or contribute to this, we would be very grateful! Again, please contact one of the Officers and we'll get you involved.

If you missed the November meeting, it went really well. We had a nice turnout and Daniel Kovac did a thorough job of educating everyone on interceptor applications, sizing and standards. A big thank you to Daniel, and to Striem for sponsoring our ASPE luncheon!

Most of you know, but if not, we do not have a meeting in December, so we'll see you at the January meeting.

Best regards,

**Gary Borgmann, CPD
President – Central Indiana Chapter, ASPE**

CODE UPDATE

The Indiana Fire and Building Services Commission approved the report of the Exploratory Committee for Code Updates at their Dec. 12th meeting. The Plumbing Code, Mechanical Code, Fire Code and Fuel Gas Code are on the list to begin the process of updating. The first code to be reviewed and recommendations for updates is the Indiana Elevator Code. Stay tuned as to when the committees will be formed codes affecting the p-h-c industry.

Written Interpretation

State Building Commissioner, Craig Burgess, outlined his interpretation of Indiana Plumbing Code 305.6.1 as to whether it allows water lines to be installed in unconditioned spaces when the water lines are fully drained prior to the onset of freezing ambient temperatures, in lieu of providing insulation or heat. Read answer

<https://files.constantcontact.com/5aec105c001/9dd52f3f-7deb-4a5b-9482-7c362a445f99.pdf>

Information provided by IPHCC :

Indiana Register

FIRE PREVENTION AND BUILDING SAFETY COMMISSION
Department of Homeland Security

Written Interpretation of the State Building Commissioner

Interpretation #: CEB-2021-39-2012 IPC-305.6.1

Building or Fire Safety Law Interpreted

675 IAC 16-1.4 2012 Indiana Plumbing Code, Section 305.6.1 Waterlines. Waterlines shall not be installed outside of a building, in attics or crawlspaces, or in any other place subjected to freezing temperatures, unless adequate provision is made to protect such waterlines from freezing by insulation, ambient heat, or alternate heat source. No waterlines shall be concealed in outside walls, above grade.

Issue

Whether Section 305.6.1 of the *2012 Indiana Plumbing Code (IPC)* allows water lines to be installed in unconditioned spaces when the water lines are fully drained prior to the onset of freezing ambient temperatures, in lieu of providing insulation or heat.

Interpretation of the State Building Commissioner

Yes, Section 305.6.1 of the *2012 IPC* does allow water lines to be installed in unconditioned spaces when the lines are fully drained prior to the onset of freezing ambient temperatures, in lieu of providing insulation or heat.

Rationale

Section 305.6.1 of the *2012 IPC* contains two requirements. They will be examined in the order they appear.

The first requirement is that waterlines shall not be installed outside of a building, or in other environments subject to freezing temperatures unless measures are taken to ensure the lines will not freeze. The section specifies three methods of preventing such freezing, and while it does not specifically open the possibility of additional methods being used, research into the commission's intent in adopting the regulation has not indicated that they wished to limit preventative measures to only those listed in the text. The intent in adopting the regulation is simply to prevent freezing water supply lines and the damage they cause. Standard design and construction practices in structures that are unoccupied and unconditioned in winter is not to provide a constant heat source, but rather to "winterize" the structure's systems, a process that includes a complete draining of all water supply lines, fixtures, and fittings. When done completely and faithfully before the onset of freezing temperatures each year, frozen water supply lines are not possible. In fact, this is the design principle employed in standard "frost-free" hose bibbs, devices which are always located on the exterior of structures where freezing temperatures are common, and which are designed to drain all water from them whenever they are turned off, eliminating the possibility of water freezing in the fitting. The section states that insulation is an acceptable means of preventing freezing, but the fact is that given enough time and the absence of a heat source, no amount of insulation will prevent eventual equalization of temperatures on each side of the insulation. This is even recognized in the ICC commentary on the subject.

The second requirement is that no waterlines are allowed to be concealed in outside walls above grade. This requirement is intended to apply to the exterior walls of buildings, where concealed lines would be subject to freezing even when the interior of the structure is conditioned. It is not a blanket prohibition on the installation of water lines in walls that are constructed completely outside the building's boundaries.

If IPC 305.6.1 were intended to limit the methods used to prevent frozen water lines to only heat and/or insulation, then it would effectively prohibit any building containing water lines (including those buildings intended to be unoccupied in winter) from being allowed to reach freezing temperatures at the location of those lines. Conversely, no building that is subject to freezing throughout would ever be allowed to contain water lines. Either would impose a substantial fiscal burden on Indiana's construction industry, which was not the intent of the commission in adopting the regulation.

Less Time - More Profits - LESS LEAKS!

WHAT OTHERS HAVE FOUND...

"...Pro-Flex CSST not only provides a cost to cost saving against the other manufactures of CSST but is also an easier product to work with . While cost is higher than black iron the speed and reliability of Pro-Flex allows us to install faster without the worry of added cost of leaks..."

Contact Dan Cummins
for more information!
317-496-1288

"When we work on any of our gas installs that require far or short runs we usually turn our heads to Pro-Flex CSST Gas Pipe. The pipe is easy to work with and is very forgiving in every way. What I like about the product is the gasket and duo FIP/MIP connections it provides. With the duo connection adapters, one adapter can be used for either MIP or FIP, I don't have to buy two different types of fittings to prepare for my jobs. As for the gasket being within the gas connection, we don't have to crank the fittings like we had to do with previous gas pipe. Not to mention, we have less leaks (a lot less) close to none AND we are able to reuse the fittings - unlike other manufactures that are not approved to do so. It has definitely become our go to for gas piping when we want to get it done quick and when we don't want call backs!" - Terence

These and many others that made the SWITCH!

EMPLOYMENT OPPORTUNITIES

MECHANICAL CAD TECHNICIAN/DRAFTSPERSON (FORT WAYNE, INDIANA)

MSKTD's Fort Wayne office is seeking candidates for the position of Mechanical Electrical and Plumbing Tech/Drafter. Applicants should have a minimum of 2 years' experience in the construction industry. Person will work closely with Project Managers / Project Engineers in developing various project designs and documentation.

Applicants must have an Associate's degree in Construction Technology or similar. A Bachelor's degree is a plus. This position will require strong communication, time management, and organization skills. Candidate must be able to show initiative, carrying basic and complex concepts and ideas to completion with minimal direction and guidance. They must also work efficiently and productively in a team-based organization. Other skills we are looking for include, but are not limited to, the following:

- Field work and field measuring of facilities.
- Coordination with architectural disciplines and architectural details.
- Construction document production and coordination.
- Development and refinement of project details.

Requirements:

- Punctual and Responsible and Dedicated.
- Experience and proficiency with Revit is a must.
- Excellent communications skills, both written and verbal.
- Willingness to work and put in additional time when project deadlines require the effort.
- Must be a team player.

Please submit your resume and cover letter as one document in PDF format to employment@msktd.com.

IMPORTANT: Please include the word "Employment" in the subject line or your email will not get past our spam filter.

- Principals only. Recruiters, please don't contact this job poster.

About Primary Engineering

Primary Engineering is a consulting MEP design engineering firm with offices in Indianapolis, IN and Fort Wayne, IN providing design services for commercial HVAC, plumbing, electrical power, lighting, and communication systems to clients for commercial projects. We are focused on innovative engineering design and providing our clients unmatched service to their project needs. Our projects are located throughout the mid-west generally however we have projects located on multiple continents and throughout the US.

Job Description

Seeking candidates to assist with Revit design and AutoCAD drafting in the consulting **MEP design industry**. Candidates must have excellent communication skills and exhibit a desire to constantly learn and grow in the industry.

Job responsibilities and duties shall include, but are not limited to the following:

- Assist with creation of technical drawings for commercial HVAC, Plumbing, and Electrical systems using AutoCAD and Revit MEP.
- Perform field verification of existing conditions for renovation projects.
- Utilize Matterport 3D scanning camera to collect field data to incorporate into design models with point clouds.
- Coordinating with all design team members both in-house as well as outside design partners.
- Assist with design of systems at levels based on experience.

Compensation will be commensurate with experience. We offer health insurance, a company retirement plan, paid vacation, paid holidays, summer hours, and reimbursement for continuing education.

Submit resume to info@primary-eng.com with "Applicant" in the subject line.
